Overview

This guide provides information on server specifications for an InPremise version of CaseReview. While it is possible to install CaseReview components on separate servers, this guide assumes that you will install those components on one virtual machine or physical server with a maximum of 10 cases an hour.

However, if you anticipate more than 10 cases per hour (or over 200 case/day) onto CaseReview please reach out to your Sales Engineer for a deeper review of your anticipated workload to better customize the CaseReview environment. Larger systems will require load balancing across additional servers for proper application operation and performance.

Furthermore, for large environments ZOLL Defibrillator DashboardTM and CaseReview should have their own server installations for best performance.

For more details on virtual machine requirements, please contact your ZOLL Sales Engineer.

Hardware & Software Requirements

Component	Requirement	
Processor	Dual Processor with 4 core @ 3.6GHz (not exclusive)	
Memory	Minimum 16GB	
Storage (OS Disk)	Software and website installation requires 16GB above operating systems installs and SQL Server installations. Disk I/O averages at peak traffic	
	Read: ~1500kb	
	Write: ~1400kb	

Storage Disk	30GB minimum storage *Note − if running ZOLL Defibrillator Dashboard™ in conjunction with CaseReview InPremise, minimum storage requirement is 100GB plus the formula below SQL Server Requirements Use the following to understand approximate storage requirements: d = cases per day s = average case size c = file compression rate		
	Device	Compression Rate	
	R-Series	.6	
	X-Services	.88	
	AED3	.9	
	(d * (s*c)) * 365 * 7 = total storage cost for given device.		
Apache Cassandra Requirements	Note Cassandra is used as short term storage and data has a TTL (time to live) of 3 years. TTL is configurable to the second.		
	((d (s*.8)) * 1095) * number of Cassandra instances = total storage cost.		
Network	1Gbps		
Install Account	An admin account able to read, write, and modify files on the server		
Operating System	Windows Server 2012 - 2019 (not core) with a base OS language of US English		
SQL Server	SQL Server 2012 – 2019 Standard or Enterprise (not express)		
Other Requirements	Windows Management Framework 5.0 (or higher)		
	.NET Framework 4.7.2 or greater		

Client Configurations

Supported browsers: Google Chrome for desktop and Microsoft Internet Explorer 11

Browser requirements: Enable Javascript and custom fonts

Unsupported Configurations

CaseReview does not support the following configurations.

Windows

• FIPS-compliant settings.

SQL Server

- TLS connection enablement.
- Windows authentication accounts for SQL connectivity.
